

# *We take care of hospitals so they can take care of people.*

*Hospitals are secure with Ingersoll Rand Security Technologies, the peace-of-mind experts.*

For over 100 years, Ingersoll Rand companies have made public places safer and more secure. With safety and security now more crucial – and complex – than ever, we have developed the technology and expertise to provide answers for every area of a hospital. Ingersoll Rand's integrated solutions for all levels of security give hospitals peace of mind, so they can focus on patient care.

# We provide answers hospitals can trust.

Our practical, no-nonsense security solutions help keep people and assets safe.

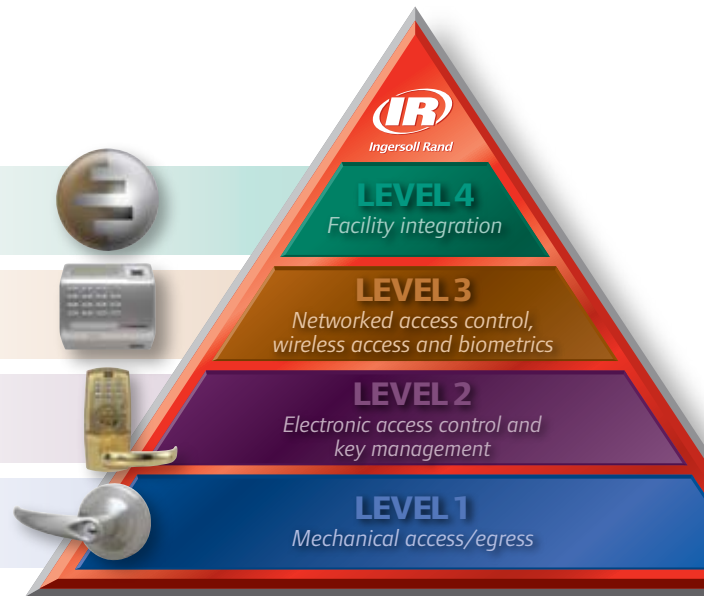

## We'll help you identify your hospital's needs and take action

In a place where compliance and productivity are at the forefront, hospital security and safety managers must balance maintenance with patient service. No matter the need, Ingersoll Rand Security Technologies has the knowledge and industry expertise to help you build an effective security and safety plan for your facility.

## Security and safety assessment

The Ingersoll Rand Security and Safety Assessment Program is a comprehensive site assessment and solution tool. In order to evaluate the critical access openings and specific security and safety needs of healthcare facilities, we've identified a method that organizes security and safety into four, fundamental levels. Using this methodology, we partner with key stakeholders in your facility and identify security and safety needs. Performing a security and safety vulnerability assessment allows us to identify gaps in your current state—and determine your optimal solutions. We provide our customers with valuable feedback on specific vulnerabilities related to their access control and fire-life safety, including recommendations on how to address them.

The Security and Safety Assessment Program provides practical, no-nonsense solutions that create an immediate and actionable plan for meeting facility physical security and fire-life safety requirements.

## What we do for hospitals

### 1) Reduce the complexity of security and regulatory issues

We understand federal and legal codes and regulatory requirements, including HIPAA and The Joint Commission regulations—and what they mean for your security and safety programs. Keeping this in mind, we provide you solutions that meet the letter and spirit of your applicable codes and regulations.

### 2) Determine and resolve healthcare security and fire-life safety vulnerabilities

By combining knowledge of federal and local codes and regulations with our methodology, we help you find the appropriate balance between security and fire-life safety needs in your facility.

### 3) Provide integrated solutions for all levels of security

The integration of all four levels of the pyramid ensures seamless security and access control of your facility. The solution that's delivered will be scaled to both your business and facility needs.

Ingersoll Rand provides what hospitals want most: peace of mind.
